# Programmable Key Fob 2-Channel 5-Amp

2-Button Key Fob

- 750' Range
- Compatible with KFX Modules
- Programmable Button
- Momentary or Toggle Configurations

PRODUCT DETAILS

Programmable Key Fob

The R25PL_KEYFOB Programmable Key Fob allows users to control relays by a simple push of a button through a key fob you hold in your hand. The key fob can be used for simple on/off actions or configured for more complex actions with each button press.

Pair Multiple Key Fobs

The R25PL_KEYFOB can be paired with up to 40 key fobs, allowing for multiple people to have fobs to control the relay. KFX modules reach working distances of 750 feet - line of site!! If you need multiple boards, each key fob can be paired with as many boards as needed.

You Configure the Action

When a button is pressed on the Key Fob, the KFX Receiver will send the command to the board. You will configure what this command is! It can be a simple toggle on/off command or complex commands including delays. Momentary commands can easily be configured with button press and button release events. Push a button and the relay energizes, release the button and the relay de-energizes.
